

DSLAM Regenerator

Our digital regenerator returns the ADSL signal to its original digital state and then regenerates the signal. This restores the signal to its original strength and quality enabling much greater extension of your ADSL serving area. This is the reason we've dubbed our solution *Infinite Reach ADSL*.

Infinite Reach ADSL

The DSLAM Regenerator is capable of providing CAF acceptable broadband to customers as far away as you have copper! Deploying multiple regenerator units along the customers loop allows the signal to be repeated as many times as needed, no limits.

Ease of Deployment

The DSLAM Regenerator is a totally transparent transmission device which handles data traffic according to the DSLAM settings. No further configuration is needed! It is also compatible with all modems and DSLAMs available on the market.

Cost-Effective

The DSLAM Regenerator provides an alternative to DSLAM deployment that requires no fiber installation and no local power. This easily makes it the most cost-effective solution to meet specific bandwidth requirements.

DSLAM REGENERATOR

The **ADSL DSLAM Regenerator** is a true digital regenerator placed between the Central Office and the Subscriber that boosts the signal to increase your effective range by 60-100%. This is the most advanced solution to extend the deployable range of ADSL technologies **currently available**.

OUR FEATURES

Increases rate and reach by 100% per regenerator, enabling infinite reach.

Managed or unmanaged solutions available.

Compatible with ADSL2/2+ Annex A or Annex M

Dual operation modes: DSLAM Regenerator or standard Loop Extender.

Compatible with all DSLAMs and modems.
